

KAREN COUNTRY CLUB

Golf Management Platform

PROJECT SPECIFICATION

Backend Foundation + Frontend Build Guide

Version 1.1 | June 2026
(Junior Development evaluation framework updated from club source documents)

Field	Detail
Project	Karen Golf Management Platform
Backend Developer	TBD (builds first — foundation layer)
Frontend Developer	TBD (builds on top — Claude Code)
Stack	Backend: API + Database Frontend: React/Next.js
Approach	Backend ships simple CRUD endpoints. Frontend adds UX, dashboards, calculations, real-time features.

Table of Contents

1. Project Overview
2. Architecture & Build Order
3. Backend Spec: Data Models (The Building Blocks)
4. Backend Spec: API Endpoints
5. Frontend Spec: Pages & Features
6. Module 1 — Rumble 2.0 Tournament
7. Module 2 — Junior Development & Performance Evaluations
8. Module 3 — Coaching & Classes
9. Module 4 — Scoring & Handicaps
10. Roles & Permissions
11. Build Phases

1. Project Overview

This platform digitises Karen Country Club's golf operations into a single web app. It replaces the Excel tournament tracker, the paper/Word-based junior development reports, and manual coaching schedules with a unified system.

1.1 What We Are Building

Four modules that share users, handicaps, and scoring data:

Module	What It Does	Who Uses It
Rumble 2.0 Tournament	Team registration, match logging, stroke calculation, auto-sorted leaderboard, head-to-head tie-breakers, knockout bracket	Committee, Players
Junior Development & Evaluations	9-level pathway, monthly performance evaluations per golfer, level-specific report templates, standardised assessment + recommendation, coach/committee sign-off, summary reports, progress timelines	Coaches, Junior Sub-Committee, Parents, Admin
Coaching & Classes	Coach schedules, age-banded group classes, 1-on-1 booking requests, attendance tracking, session notes	Coaches, Parents, Admin
Scoring & Handicaps	Score history, gross/adjusted/net scores, handicap calculation (WHS), scorecard reference, course data	All players

1.2 The Build Rule

BACKEND FIRST The backend developer builds all data models, migrations, and CRUD API endpoints. No business logic beyond validation. No UI. Just the building blocks.

FRONTEND SECOND The frontend developer (Claude Code) builds all pages, dashboards, forms, real-time features, and complex logic (handicap maths, level-specific report rendering, sorting) on top of the API.

The backend should be dumb pipes — store data, validate types, return JSON. The frontend owns UX, calculations, sorting, filtering, and presentation. For evaluations specifically: the backend stores one flexible evaluation row; the frontend decides which fields to show based on the golfer's level band.

2. Architecture & Build Order

2.1 Tech Stack

Layer	Technology	Notes
Database	PostgreSQL	Relational. All models below become tables.
Backend API	Node.js (Express) or Python (FastAPI/Django)	REST or GraphQL. Developer's choice.
Auth	JWT or session-based	Role-based: Admin, Coach, Committee, Parent, Player
Frontend	React / Next.js	Built with Claude Code on top of the API
Hosting	TBD	Vercel, Railway, or self-hosted

2.2 Build Sequence

Phase	Who	What Ships	Duration
Phase 1a	Backend	Auth + Users + Roles + Course data models & CRUD	Week 1-2
Phase 1b	Backend	Rumble tournament models (Teams, Matches, Penalties) & CRUD	Week 2-3
Phase 1c	Backend	Junior dev models (Profiles, Level Bands, Evaluations, Sign-offs) & CRUD	Week 3-4
Phase 1d	Backend	Coaching models (Classes, Sessions, Bookings, Attendance) & CRUD	Week 4-5
Phase 1e	Backend	Scoring models (Rounds, Scores, Handicap history) & CRUD	Week 5-6
Phase 2a	Frontend	Auth pages, dashboard shell, Rumble tournament UI	Week 4-7
Phase 2b	Frontend	Junior portal, evaluation forms, parent views, summary reports	Week 7-9
Phase 2c	Frontend	Coaching/booking system, attendance, calendar	Week 9-11
Phase 2d	Frontend	Scoring, handicap tracker, scorecard entry	Week 11-13
Phase 3	Both	Testing, iteration, real data migration	Week 13-15

3. Backend Spec: Data Models

Each model = one database table. Each field = one column. The backend exposes CRUD endpoints for each.

3.1 Users & Auth

Field	Type	Notes
id	UUID / auto-increment	Primary key
email	string, unique	Login identifier
password_hash	string	Hashed password
first_name	string	
last_name	string	
phone	string, nullable	
role	enum	admin, coach, committee, parent, player
membership_type	enum	full, social, guest, junior
handicap_index	decimal, nullable	WHS Handicap Index
cdh_number	string, nullable	Central Database of Handicaps ID
is_active	boolean	Account active flag
created_at	timestamp	
updated_at	timestamp	

3.2 Course & Scorecard Reference

Table: courses

Field	Type	Notes
id	int	Primary key
name	string	'Karen Country Club'
par	int	72
altitude_ft	int, nullable	~6000
grass_type	string, nullable	'Kikuyu'

Table: tee_sets

Field	Type	Notes
id	int	Primary key
course_id	FK -> courses	
name	string	White, Yellow, Blue, Red
gender	enum	men, women

course_rating	decimal	e.g. 73.0
slope_rating	int	e.g. 137
total_yards	int	e.g. 6961

Table: holes

Field	Type	Notes
id	int	Primary key
course_id	FK -> courses	
hole_number	int	1-18
par	int	3, 4, or 5
stroke_index	int	1-18
white_yards	int	
yellow_yards	int	
blue_yards	int	
red_yards	int	

3.3 Rumble 2.0 Tournament

Table: tournaments

Field	Type	Notes
id	int	Primary key
name	string	'Karen Rumble 2.0'
year	int	2026
format	string	'Four Ball Better Ball'
handicap_allowance	decimal	0.9 (90%)
max_stroke_diff	int	8
min_games	int	8
max_games	int	12
qualify_top_n	int	16
points_win	int	3
points_tie	int	2
points_loss	int	1
penalty_late_cancel	int	-3
penalty_declined	int	-3
round_robin_start	date	
round_robin_end	date	
status	enum	registration, round_robin, knockout, complete

Table: teams

Field	Type	Notes
id	int	Primary key
tournament_id	FK -> tournaments	
name	string	'Mwangi/Ochieng'
player_1_id	FK -> users	
player_1_handicap	decimal	Course handicap at registration
player_2_id	FK -> users	
player_2_handicap	decimal	
is_active	boolean	Can be disqualified

Table: matches

Field	Type	Notes
id	int	Primary key
tournament_id	FK -> tournaments	
match_date	date, nullable	
tee_played	enum	white, yellow, blue, red
starting_tee	enum	hole_1, hole_10
team_a_id	FK -> teams	
team_b_id	FK -> teams	
result	enum, nullable	team_a_win, team_b_win, tie
winner_id	FK -> teams, nullable	
score_description	string, nullable	'3&2', '1UP', 'A/S'
stage	enum	round_robin, round_of_16, quarter, semi, final
created_at	timestamp	

Table: penalties

One row per penalty event. Names the specific team — no positional ambiguity (the bug from the Excel version).

Field	Type	Notes
id	int	Primary key
match_id	FK -> matches, nullable	
team_id	FK -> teams	The penalised team
penalty_type	enum	late_cancel, declined_invite
points_deducted	int	-3

notes	text, nullable	
created_at	timestamp	

3.4 Junior Development & Evaluations

This is the core of the performance-evaluation system. Reflects the club's actual 9-level pathway and the four report templates in use.

Table: level_bands (reference data, pre-seeded)

Defines the four pathway bands. Drives which evaluation template the frontend renders.

Field	Type	Notes
id	int	Primary key
name	string	'Levels 1-3', 'Levels 4-5', 'Levels 6-8', 'Level 9+'
band_label	string	'Beginners', 'Attaining Handicap', 'Intermediate & Advanced', 'Enhanced / Elite'
min_level	int	1, 4, 6, 9
max_level	int	3, 5, 8, 99 (99 = 9+)
min_sessions	int	12, 24, 24, 24
min_duration_months	int, nullable	null, 3, 8, 8
report_template	enum	skills / practice_scores / competition (which fields apply)
description	text	Curriculum focus for the band

Table: level_benchmarks (reference data, pre-seeded)

Target scores per level (from the club's Level 6-8 statistics table). Frontend compares actuals against these.

Field	Type	Notes
id	int	Primary key
level_number	int	6, 7, 8 (extendable)
full_swing_target	int	21 / 20 / 19
around_green_target	int	8 / 7 / 6
putting_target	int	19 / 18 / 17
nine_hole_target	int	48 / 45 / 42

Table: junior_profiles

Enriched with the real intake/registration fields from the club's data sheet.

Field	Type	Notes
id	int	Primary key
user_id	FK -> users	The junior golfer
parent_id	FK -> users	Parent/guardian
date_of_birth	date	

gender	enum	male, female
current_level	int	1-9 (9 = '9+')
band_id	FK -> level_bands	Derived from current_level
curriculum	string, nullable	Curriculum the junior follows
has_handicap	boolean	
handicap_index	decimal, nullable	If handicapped
played_us_kids	boolean, nullable	If non-handicapped: played US Kids Golf?
us_kids_best_score	int, nullable	Best US Kids score if applicable
experience	enum	beginner, lt_1yr, 1_3yr, 4_6yr, 7_10yr
availability	enum	twice_weekly, weekends_only, more_than_twice, holidays_only
medical_conditions	text, nullable	Injuries / conditions
golf_goals	text, nullable	Multi-select goals (store as JSON/CSV)
tournament_ready	boolean	Coach assessment flag

Table: evaluations (the monthly individual report)

ONE row per golfer per month. Common fields apply to every band; the band-specific fields are nullable and the frontend shows only those relevant to the golfer's level. This keeps the backend a single simple table while supporting all four templates.

Field	Type	Notes
id	int	Primary key
junior_id	FK -> junior_profiles	
coach_id	FK -> users	Evaluating coach
report_month	date	First of the month, e.g. 2026-03-01
current_level	int	Level at time of report
attendance_count	int	Classes attended this month
attendance_total	int, nullable	Out of how many scheduled
assessment	enum	below_expectation, meeting_expectation, exceeding_expectation
recommendation	enum	continue_level, move_next_level
special_remarks	text, nullable	Optional coach remarks
putting_assessment	text, nullable	BAND 1-3 only
chipping_assessment	text, nullable	BAND 1-3 only
full_swing_assessment	text, nullable	BAND 1-3 only
avg_score_9	decimal, nullable	BAND 4-5 (target 60-65)
avg_score_18	decimal, nullable	BAND 4-5 (target 120-130)
competitions_played	int, nullable	BAND 6-8 & 9+
best_gross_score	int, nullable	BAND 6-8 & 9+ (best this month)

coach_signed	boolean	Coach sign-off
coach_signed_date	date, nullable	
committee_signed	boolean	Junior Sub-Committee sign-off
committee_signed_date	date, nullable	
committee_signed_by	FK -> users, nullable	
created_at	timestamp	

Table: badges + junior_badges (optional / future)

Skill-badge system is optional for v1. Tables kept lightweight so it can be switched on later without migration pain.

Field	Type	Notes
badges.id	int	Primary key
badges.name	string	'Level 3 Complete', 'First Birdie'
badges.description	text	
badges.level_required	int, nullable	Auto-award trigger
junior_badges.junior_id	FK -> junior_profiles	
junior_badges.badge_id	FK -> badges	
junior_badges.awarded_date	date	
junior_badges.awarded_by	FK -> users	

3.5 Coaching & Classes

Table: classes

Field	Type	Notes
id	int	Primary key
name	string	'Beginner Group A'
coach_id	FK -> users	
band_id	FK -> level_bands, nullable	Which pathway band
age_group	string, nullable	'5-10', '11-18'
schedule	string	'Mondays 4:30-5:30pm'
max_students	int	e.g. 6 for clinics
is_active	boolean	

Table: class_enrollments

Field	Type	Notes
class_id	FK -> classes	
junior_id	FK -> junior_profiles	
enrolled_date	date	
status	enum	active, dropped

Table: sessions

Field	Type	Notes
id	int	Primary key
class_id	FK -> classes, nullable	Null if 1-on-1
coach_id	FK -> users	
session_type	enum	group, one_on_one, evaluation, tournament_prep
date	date	
start_time	time	
end_time	time	
notes	text, nullable	Session notes
status	enum	scheduled, completed, cancelled

Table: attendance

Field	Type	Notes
id	int	Primary key
session_id	FK -> sessions	

junior_id	FK -> junior_profiles	
status	enum	present, absent, excused

Table: booking_requests

Field	Type	Notes
id	int	Primary key
parent_id	FK -> users	
junior_id	FK -> junior_profiles	
coach_id	FK -> users, nullable	Preferred coach
preferred_date	date	
preferred_time	time	
status	enum	pending, approved, declined
session_id	FK -> sessions, nullable	Once approved
admin_notes	text, nullable	

3.6 Scoring & Handicap History

Table: rounds

Field	Type	Notes
id	int	Primary key
user_id	FK -> users	
course_id	FK -> courses	
tee_set_id	FK -> tee_sets	
date_played	date	
round_type	enum	casual, tournament, competition
competition_name	string, nullable	
gross_score	int	
adjusted_gross_score	int, nullable	
score_differential	decimal, nullable	
pcc_adjustment	decimal, nullable	
handicap_before	decimal, nullable	
handicap_after	decimal, nullable	

Table: hole_scores

Field	Type	Notes
id	int	Primary key

round_id	FK -> rounds	
hole_number	int	1-18
strokes	int	
putts	int, nullable	
fairway_hit	boolean, nullable	
gir	boolean, nullable	

4. Backend Spec: API Endpoints

Every table gets the same five endpoints. The backend repeats this pattern for each model.

Method	Endpoint Pattern	What It Does
POST	/api/{resource}	Create one record
GET	/api/{resource}	List all (with query filters)
GET	/api/{resource}/:id	Get one by ID
PUT	/api/{resource}/:id	Update one by ID
DELETE	/api/{resource}/:id	Delete one by ID

4.1 Full Endpoint List

Resource	Endpoint Base	Filters Backend Should Support
Users	/api/users	?role=coach, ?membership_type=full, ?search=name
Courses / Tees / Holes	/api/courses, /tee-sets, /holes	?course_id=1
Tournaments	/api/tournaments	?year=2026, ?status=round_robin
Teams	/api/teams	?tournament_id=1, ?search=name
Matches	/api/matches	?tournament_id=1, ?team_id=5, ?stage, ?date_from, ?date_to
Penalties	/api/penalties	?team_id=5, ?match_id=10, ?type=late_cancel
Level Bands	/api/level-bands	None (small reference set)
Level Benchmarks	/api/level-benchmarks	?level_number=6
Junior Profiles	/api/juniors	?parent_id=3, ?band_id=1, ?current_level=4, ?age_min, ?age_max
Evaluations	/api/evaluations	?junior_id=1, ?coach_id=2, ?report_month=2026-03-01, ?committee_signed=false
Classes	/api/classes	?coach_id=2, ?band_id=1, ?age_group=5-10, ?is_active=true
Enrollments	/api/enrollments	?class_id=1, ?junior_id=3
Sessions	/api/sessions	?coach_id=2, ?class_id=1, ?date_from, ?date_to, ?type=one_on_one
Attendance	/api/attendance	?session_id=5, ?junior_id=3
Booking Requests	/api/booking-requests	?parent_id=3, ?status=pending, ?coach_id=2
Rounds	/api/rounds	?user_id=1, ?course_id=1, ?round_type=tournament
Hole Scores	/api/hole-scores	?round_id=5

4.2 Special Endpoints

Computed/aggregate endpoints beyond basic CRUD:

Method	Endpoint	What It Returns
GET	/api/tournaments/:id/leaderboard	Teams with computed played, W/T/L, match_pts, penalties, total — sorted desc
GET	/api/tournaments/:id/head-to-head?team_a=X&team_b=Y	Direct record between two teams
GET	/api/matches/:id/stroke-calc	Both handicaps, 90% diff, cap 8, per-hole stroke markers
GET	/api/juniors/:id/progress	Timeline: evaluations, level changes, attendance, benchmark comparison
GET	/api/evaluations/summary?band_id=1&month=2026-03	Band summary report: all golfers in a band for the month with sign-off status
GET	/api/juniors/:id/monthly-report?month=2026-03	One golfer's full monthly report (band-aware fields)
GET	/api/coaches/:id/schedule?week=2026-03-15	All sessions for a coach in a given week
GET	/api/users/:id/handicap-history	Rounds with differentials and handicap snapshots over time

5. Frontend Spec: Pages & Features

What the frontend developer (you) builds with Claude Code, consuming the API above.

5.1 Pages by Role

Page	Role	What It Shows
Login / Register	All	Email + password auth
Dashboard	All	Role-specific home
Rumble Leaderboard	Public	Auto-sorted standings, qualification status, search
Match Entry Form	Admin	Log match: date, tee, teams, result, penalties
Stroke Calculator	Player/Admin	Two teams -> per-hole stroke allocation
Head-to-Head Lookup	Admin	Two tied teams -> direct record
Knockout Bracket	Public	Round of 16 to Final
Junior Dashboard	Parent	Child's level, band, evaluations, attendance, upcoming classes
Evaluation Form	Coach	Band-aware monthly report form (renders correct fields per level)
Summary Report View	Coach/Committee	All golfers in a band for a month + sign-off workflow
Coach Dashboard	Coach	Schedule, students, evaluations due, session notes
Admin Panel	Admin	User mgmt, tournament config, reports
Class Calendar	Parent/Coach	Upcoming classes, attendance history
Booking Request Form	Parent	Request 1-on-1: coach, date, time
Score Entry	Player	Hole-by-hole scores, auto-calc differentials
Handicap History	Player	Graph of handicap over time

5.2 Frontend Owns These Calculations

Calculation	Formula / Logic	Where Used
Course Handicap	$\text{Index} \times (\text{Slope} / 113) + (\text{CR} - \text{Par})$	Stroke calc, score entry
Stroke Allocation	90% of best-ball HC difference, cap 8, assign by SI	Stroke calculator
Match Points	$W \times 3 + T \times 2 + L \times 1$	Leaderboard
Score Differential	$(113 / \text{Slope}) \times (\text{Adj Gross} - \text{CR} - \text{PCC})$	Handicap history
Leaderboard Sort	Total points desc, then head-to-head	Leaderboard
Evaluation Template Switch	Show fields by golfer's band (skills / scores / competition)	Evaluation form
Benchmark Comparison	Compare best_gross / avg scores vs level_benchmarks	Junior progress, evaluations
Level Promotion Hint	Flag when recommendation = move_next_level	Committee review

6. Module 1: Rumble 2.0 Tournament

Replaces the Excel tracker. All Terms of Competition (TOC) rules encoded here.

6.1 Tournament Rules (Hardcoded from TOC)

Rule	Value	TOC Reference
Format	Four Ball Better Ball	Rule 2
Handicap allowance	90% of difference	Rule 2
Max stroke difference	8	Rule 2
Round robin games	Min 8, max 12	Rule 5a
Round robin period	15 weeks	Rule 10
Points: Win / Tie / Loss	3 / 2 / 1	Rule 11
Late cancel penalty	-3 points	Rule 7
Declined invite penalty	-3 points	Rule 8
Qualification	Top 16 by points	Rule 5b
Tie-breaker	Head-to-head result	Rule 12
Starting tees	1st or 10th tee	Rule 3
Entry fee	KES 1,000 per player	Rule 4
Registration deadline	13 March 2026	Rule 9
Lateness 0-5 min	Loss of first hole	Rule 14
Lateness 5+ min	Loss of match	Rule 14

6.2 Penalty Design (Lesson from Excel)

Positional Team A / Team B penalty checkboxes caused cross-wiring bugs in the spreadsheet. The penalties table fixes this: each penalty row names the specific team. No ambiguity.

7. Module 2: Junior Development & Performance Evaluations

This module digitises the club's real junior pathway and its monthly evaluation process. The structures below come directly from the club's Implementation Plan and the four Word report templates currently in use.

7.1 The Pathway — Four Level Bands

Band	Levels	Sessions / Duration	Focus & Exit Criteria
Beginners	1-3	12 sessions (~6 weeks, 2/week)	Putting, chipping, full-swing basics, etiquette, safety. Clinics of max 6 golfers. No scoring yet.
Attaining Handicap	4-5	24 sessions (min 3 months)	Course lessons in groups of 4. Get scorecards signed for a handicap. Targets: 9-hole 60-65, 18-hole 120-130.
Intermediate & Advanced	6-8	24 sessions (8-12 months)	Competitive play, green reading, game management. 2-3 competitive rounds/month. Karen Junior Challenge mandatory.
Enhanced / Elite	9+	Individualised (alt. professionals)	HI 15 and below, sub-84 rounds consistently. Scholarship / pro track. Faldo Series, US Kids, Strokeplay.

7.2 Performance Benchmarks (Levels 6-8)

Target statistics the club uses to gauge advancement. Seed these into level_benchmarks; the frontend compares actuals against them.

Level	Full Swing	Around the Green	Putting	9-Hole Score
Level 6	21	8	19	48
Level 7	20	7	18	45
Level 8	19	6	17	42

7.3 The Evaluation System (Core)

Coaches prepare one individual report per golfer at the end of every month and submit to the Junior Sub-Committee. The report fields differ by band, but two standardised judgements apply to every golfer regardless of level.

Standardised Assessment (all bands)

Stored in evaluations.assessment. Strictly one of three values for uniformity, plus optional remarks:

Value	Meaning
Below Expectation	Golfer is not yet meeting the level's criteria

Meeting Expectation	Golfer is performing at the expected standard
Exceeding Expectation	Golfer is performing above the level standard
Special Remarks (optional)	Free-text note — evaluations.special_remarks

Standardised Recommendation (all bands)

Stored in evaluations.recommendation. Strictly one of two values:

Value	Meaning
Continue in current program level	Golfer stays in current level next month
Move to next level	Golfer is promoted (subject to committee sign-off)

Individual Report Fields by Band

The frontend renders the correct template based on the golfer's band. All four write to the single evaluations table (unused fields stay null).

Levels 1-3 (skills template):

Report Field	Maps To
Golfer Name / Age / Current Level	junior_profiles + current_level
Putting Assessment	putting_assessment
Chipping Assessment	chipping_assessment
Full Swing	full_swing_assessment
Attendance (classes attended)	attendance_count
Recommendation	recommendation

Levels 4-5 (practice-scores template):

Report Field	Maps To
Golfer Name / Age / Current Level	junior_profiles + current_level
Average Practice Scores - 9 Holes	avg_score_9
Average Practice Scores - 18 Holes	avg_score_18
Attendance	attendance_count
Recommendation	recommendation

Levels 6-8 and 9+ (competition template):

Report Field	Maps To
Golfer Name / Age / Current Level	junior_profiles + current_level

Total Competitions Played	competitions_played
Best Score this Month (Gross)	best_gross_score
Program Attendance	attendance_count
Assessment	assessment

Sign-off Chain

Every report follows a two-step approval, tracked by the boolean + date + signer fields on the evaluations table:

Step	Who	Fields Set
1. Coach signs	Evaluating coach	coach_signed = true, coach_signed_date
2. Committee sign-off	Junior Sub-Committee	committee_signed = true, committee_signed_date, committee_signed_by

7.4 Summary Reports (Band-Level, Monthly)

Alongside individual reports, the coach submits one summary report per band each month. The frontend generates this from the `/api/evaluations/summary` endpoint — no extra table needed; it aggregates that month's evaluations for the band.

Band	Summary Columns
Levels 1-3	Golfer Name, Level, Age, Attendance in month, Overall Assessment
Levels 4-5	Golfer Name, Level, Age, Attendance, Latest 9/18-hole round scores, Overall Assessment
Levels 6-8 / 9+	Golfer Name, Level, Age, Attendance, Total Competitions, Best Score, Overall Assessment

7.5 Junior Intake / Registration

Captured into `junior_profiles` on registration (from the club's data sheet):

Field	Options / Notes
Gender	Male / Female
Age	Used for age-banded class enrollment (5-10, 11-18)
Curriculum followed	Free text / dropdown
Handicap status	Has handicap (+ index) OR no handicap
US Kids Golf history	Played? + best score (for non-handicapped)
Experience	Beginner, <1yr, 1-3yr, 4-6yr, 7-10yr
Availability	Twice weekly, Weekends only, More than twice, Holidays only
Medical conditions	Free text
Golf goals	Multi-select

7.6 Competition Eligibility Rules

Events can set eligibility the system enforces against `junior_profiles`:

Rule Type	Example	Checked Against
Age range	Age 7-9 only	<code>date_of_birth</code>
Level / band	Levels 1-3 only	<code>current_level / band_id</code>
Handicap required	Must have handicap	<code>has_handicap</code>
Handicap ceiling	Index below 20	<code>handicap_index</code>
Level minimum	Level 6+ only	<code>current_level</code>

8. Module 3: Coaching & Classes

8.1 Age-Banded Class Structure

From the club timetable: Levels 1-3 and 4-5 enroll by age group (5-10 and 11-18). Levels 6-8 and 9+ are not age-banded — all ages train together.

Band	Enrollment	Example Slots
Levels 1-3	By age (5-10, 11-18)	Mon/Wed 4:30 & 5:45pm; Sat 9 & 10:15am
Levels 4-5	By age (5-10, 11-18)	Tue/Thu 4:30 & 5:45pm; Sat 11:30 & 12:45pm
Levels 6-8 / 9+	All ages together	Fri 4:30pm; Sat 2 & 3:15pm

8.2 1-on-1 Booking Flow

1) Parent opens child's profile. 2) Taps 'Request 1-on-1 Session'. 3) Selects preferred coach, date, time. 4) Request goes to pending. 5) Coach or admin approves/declines. 6) Approval creates a session. 7) After the session, coach marks attendance and may attach an evaluation.

9. Module 4: Scoring & Handicaps

9.1 Score Entry

Per round: date, course, tee set, round type, gross score. Optionally per hole: strokes, putts, fairway hit, GIR. The frontend computes adjusted gross, score differential, and the handicap snapshot.

9.2 Karen CC Course Data (Pre-seeded)

Backend seeds 18 holes, 4 tee sets, and CR/Slope from the scorecard reference. Static unless the course is re-rated. SI 1 = Hole 6 (par-4 472yds); SI 18 = Hole 12; back-nine count-back used for tournament tie-breaks.

10. Roles & Permissions

Role	Can Do	Cannot Do
Admin	Everything: users, tournaments, penalties, classes, evaluations, reports, config	N/A
Coach	View assigned students, create/sign evaluations, mark attendance, manage own sessions, session notes	Create tournaments, manage other coaches, committee sign-off
Committee	Review & sign off evaluations and summary reports, view all juniors, approve level promotions	Create evaluations, manage classes/tournaments
Parent	View own child's profile/progress/reports, request bookings, view class schedule & attendance	Evaluate students, access other children, admin panel
Player	View own profile, enter scores, view handicap history, view standings	Access junior profiles, manage classes, create evaluations

11. Build Phases — Summary

BACKEND Build the models and CRUD endpoints in Sections 3-4 with API docs (Swagger/OpenAPI). Seed Karen CC course data, the four level_bands, and the level_benchmarks.

FRONTEND Build the pages in Section 5 with Claude Code. Own all calculations in Section 5.2 — including the band-aware evaluation form that renders the right template per golfer.

ITERATE Review, add endpoints as the frontend discovers needs, and migrate real player/team/junior data from the existing Excel and Word documents.

This document is the contract between backend and frontend. If it is in Section 3, the backend builds it. If it is in Section 5, the frontend builds it. Everything else is discussed.
